This book examines the effects of alcohol on gender relations in traditional Europe, focussing on England, France, and Italy in the late medieval and early modern periods, roughly 1300 to 1700. While alcohol causes physiological changes that are scientifically verifiable, the work of anthropologists reveals that much of what

passes for drinking behavior and drunken comportment varies from one society to the next. In traditional Europe, as in modern Western societies, drinking led to increased sexual activity for both men and women, and it inclined men to commit acts of violence. Despite male fears of female sexuality and despite patriarchal restraints, women still consumed alcoholic beverages, sometimes in gargantuan amounts. This widespread consumption of wine, ale, or beer illustrates the importance of alcohol in traditional Europe. Alcohol was the ubiquitous social lubricant, and alcoholic beverages formed an important part of most people's diets.

This book examines drinking and attitudes to alcohol consumption in late medieval and early modern England, France, and Italy, especially as they related to sexual and violent behavior and to gender relations. According to widespread beliefs, the consumption of alcohol led to increased sexual activity among both men and women, and it also led to disorderly conduct among women and violent conduct among men. Dr Lynn shows how alcohol was a fundamental part of the diets of most people, including women, resulting in daily drinking of large amounts of ale, beer, or wine. This study offers an intimate insight into both the altered states induced by alcohol, and, by opposition, into normal relations in family, community, and society.

Hailed an immediate classic of Finnish literature on its publication in 1978 and an international bestseller that has been translated into 19 languages, Märta Tikkanen's verse novel is a haunting, profoundly evocative portrait of one woman's fraught relationship with her alcoholic husband, inspired by the author's own experience. In language that is as delicate as it is fierce, Tikkanen explores the depths of fear and violence that often accompany addiction and the struggle to reconcile that pain with the deep love

and strength necessary to hold a family together through it all. As much a story of resilience as it is suffering, *The Love Story of the Century* is a bittersweet account of the complexities of addiction, the power of creativity, and the redemption of love.

Alcohol consumption and alcohol-related problems among women have long been a focus of concern and often the targets for prejudice and distortion. This book brings together a wide range of contemporary and historical evidence on the consumption of alcohol and its associated adverse consequences and benefits amongst women. Broad in its perspective, it does not concentrate solely upon the ill effects associated with heavy or inappropriate drinking by women. Neither does it lose sight of the historical, moral and social context in which drinking occurs. The book records the widespread and persisting ambivalence or hostility in many cultures towards the relation of women with alcohol by reference to religious and social pressures, gender roles and stereotypes and the view of alcohol as a facilitator of unrestrained and 'wanton' behaviour. The ambiguity accorded is contrasted with the normative nature of female drinking in many contexts and the dominant role of women as producers and retailers of alcohol in many developing societies.

Traditional Europe had high levels of violence and of alcohol consumption, both higher than they are in modern Western societies, where studies demonstrate a link between violence and alcohol. A. Lynn Martin uses an anthropological approach to examine drinking, drinking establishments, violence, and disorder, and compares the wine-producing south with the beer-drinking north and Catholic France and Italy with Protestant England, and explores whether alcohol consumption can also explain the violence and disorder of traditional Europe. Both Catholic and Protestant moralists believed in the link, and they condemned drunkenness and drinking establishments for causing violence and disorder. They did

not advocate complete abstinence, however, for alcoholic beverages had an important role in most people's diets. Less appreciated by the moralists was alcohol's function as the ubiquitous social lubricant and the increasing importance of alehouses and taverns as centers of popular recreation. The study utilizes both quantitative and qualitative evidence from a wide variety of sources to question the beliefs of the moralists and the assumptions of modern scholars about the role of alcohol and drinking establishments in causing violence and disorder. It ends by analyzing the often-conflicting regulations of local, regional, and national governments that attempted to ensure that their citizens had a reliable supply of good drink at a reasonable cost but also to control who drank what, where, when, and how. No other comparable book examines the relationship of alcohol to violence and disorder during this period.

According to the popular press in the mid twentieth century, American women, in a misguided attempt to act like men in work and leisure, were drinking more. "Lady Lushes" were becoming a widespread social phenomenon. From the glamorous hard-drinking flapper of the 1920s to the disgraced and alcoholic wife and mother played by Lee Remick in the 1962 film "Days of Wine and Roses," alcohol consumption by American women has been seen as both a prerogative and as a threat to health, happiness, and the social order. In *Lady Lushes*, medical historian Michelle L. McClellan traces the story of the female alcoholic from the late-nineteenth through the twentieth century. She draws on a range of sources to demonstrate the persistence of the belief that alcohol use is antithetical to an idealized feminine role, particularly one that glorifies motherhood. *Lady Lushes* offers a fresh perspective on the importance of gender role ideology in the formation of medical knowledge and authority.

"By using the changing perceptions of alcohol and gender as the focus, Murdock deftly illustrates the social and political events that impacted American culture." -- American Studies International

Research has shown that a developmental process of maturing out of alcohol involvement occurs during young adulthood, and that this process is related to both young adult role transitions (e.g., marriage) and personality developmental (e.g., decreased disinhibition and neuroticism). The current study extended past research by testing whether protective marriage and personality effects on maturing out were stronger among more severe late adolescent drinkers, and whether protective marriage effects were stronger among those who experienced more personality development. Parental alcoholism and gender were tested as moderators of marriage, personality, and late adolescent drinking effects on maturing out; and as distal predictors mediated by these effects. Participants were a subsample (N = 844; 51% children of alcoholics; 53% male, 71% non-Hispanic Caucasian, 27% Hispanic; Chassin, Barrera, Bech, & Kossak-Fuller, 1992) from a larger longitudinal study of familial alcoholism. Hypotheses were tested with latent growth models characterizing alcohol consumption and drinking consequence trajectories from late adolescence to adulthood (age 17-40). Past findings were replicated by showing protective effects of becoming married, sensation-seeking reductions, and neuroticism reductions on the drinking trajectories. Moderation tests showed that protective marriage effects on the drinking trajectories were stronger among those with higher pre-marriage drinking in late adolescence (i.e., higher growth intercepts). This might reflect role socialization mechanisms such that more severe drinking produces more conflict with the demands of new roles (i.e., role incompatibility), thus requiring greater drinking reductions to resolve this conflict. In contrast, little evidence was found for moderation of personality effects by late adolescent drinking or for moderation of marriage effects by personality. Parental alcoholism findings suggested complex moderated mediation pathways. Parental alcoholism predicted less drinking reduction through decreasing the likelihood of marriage

Read PDF Alcohol And Gender In Late Medieval And Early Modern Europe Early

(mediation) and muting marriage's effect on the drinking trajectories (moderation), but parental alcoholism also predicted more drinking reduction through increasing initial drinking in late adolescence (mediation). The current study provides new insights into naturally occurring processes of recovery during young adulthood and suggests that developmentally-tailored interventions for young adults could harness these natural recovery processes (e.g., by integrating role incompatibility themes and addressing factors that block role effects among those with familial alcoholism).

Alcohol use by young people is extremely dangerous - both to themselves and society at large. Underage alcohol use is associated with traffic fatalities, violence, unsafe sex, suicide, educational failure, and other problem behaviors that diminish the prospects of future success, as well as health risks and the earlier teens start drinking, the greater the danger. Despite these serious concerns, the media continues to make drinking look attractive to youth, and it remains possible and even easy for teenagers to get access to alcohol. Why is this dangerous behavior so pervasive? What can be done to prevent it? What will work and who is responsible for making sure it happens? Reducing Underage Drinking addresses these questions and proposes a new way to combat underage alcohol use. It explores the ways in which may different individuals and groups contribute to the problem and how they can be enlisted to prevent it. Reducing Underage Drinking will serve as both a game plan and a call to arms for anyone with an investment in youth health and safety.
