This important new study of episcopal office and clerical identity in a socially and culturally dynamic region of medieval Europe examines the construction and representation of episcopal power and authority in the archdiocese of Reims during the dynamic and sometimes turbulent century from 1050 to 1150. Drawing on a wide range of diplomatic, hagiographical, and other narrative sources, John S. Ott considers how bishops conceived of and projected their authority collectively and individually. In examining episcopal professional identities and notions of office, he explores how prelates used textual production and their physical landscapes to craft historical narratives and consolidate local and regional memories around ideals that established themselves as not only religious authorities but cultural arbiters. This study reveals that, far from being reactive and hostile to cultural and religious change, bishops regularly grappled with and sought to affect, positively and to their advantage, new and emerging cultural and religious norms.

Thirteenth-century England was a special place and time to be a bishop. Like their predecessors, these bishops were key members of the regnal community: anointers of kings, tenants-in-chief, pastors, counsellors, scholars, diplomats, the brothers and friends of kings and barons, and the protectors of the weak. But now circumstance and personality converged to produce an uncommonly dedicated episcopate—dedicated not only to its pastoral mission but also to the defence of the kingdom and the oversight of royal government. This cohort was bound by corporate solidarity and a vigorous culture, and possessed an authority to reform the king, and so influence political events, unknown by the episcopates of other kingdoms. These bishops were, then, to place themselves at the heart of the dramatic events of this era. Under King John and Henry III—throughout rebellion, civil war, and invasion from France, and the turbulent years of Minority government and Henry's early personal rule—the bishops acted as peacemakers: they supported royal power when it was threatened, for the sake of regnal peace, but also used their unique authority to reform the king when his illegal actions threatened to provoke his barons to rebellion. This changed, however, between 1258 and 1265, when around half of England's bishops set aside their loyalty to the king and joined a group of magnates, led by Simon de Montfort, in England's first revolution, appropriating royal powers in order to establish conciliar rule. Bishops in the Political Community of England, 1213-1272 examines the interaction between the bishops' actions on the ground and their culture, identity, and political thought. In so doing it reveals how the Montfortian bishops were forced to construct a new philosophy of power in the crucible of political crisis, and thus presents a new ideal-type in the study of politics and political thought: spontaneous ideology.

This dissertation compares the process of community formation and concepts of authority in two major rival Christian communities in the Eastern Mediterranean in the late fifth and early sixth centuries. As my dissertation shows, the Miaphysite and Chalcedonian historical narratives created distinct group identities, expressed through the creation of clearly defined patterns of authority available to lay people, bishops, monks and imperial agents. Each community articulated its communal identity through a specific model of authority that assigned distinct roles to each social group and constructed them in connection to the authority of other power players. This interconnectivity prompted both communities to assign unprecedented degrees of power and self-determination to the non-elite lay people, marking a sharp departure from the earlier narratives that saw the laity as lacking in independent agency in the sphere of church politics. This research shows that traditional ways of viewing late ancient authority as vested in emperors and bishops, with occasionally combative monks, need to be rethought. My focus on how authority was presented in polemical texts opens a new avenue for research on urban populations and civil unrest in the later Roman Empire and departs from the traditional approach, which has been focused on particular instances of urban violence while overlooking the ideological underpinnings of how the authority of urban population was conceptualized. Setting the few spectacular riots in a larger context, my work shifts the focus to a consideration of authority of the people within a framework of interconnections of authority among all players such as emperors, bishops and monks.

Written by one of the foremost historians of American Catholicism, this book presents a comprehensive history of the Roman Catholic Church in America from colonial times to the present. Hennesey examines, in particular, minority Catholics and developments in the western part of the United States, a region often overlooked in religious histories.

Focusing on the way bishops in the eleventh century used the ecclesiastical tithe - church taxes - to develop or re-order ties of loyalty and dependence within their dioceses, this book offers a new perspective on episcopacy in medieval Germany and Italy. Using three broad case studies from the dioceses of Mainz, Salzburg and Lucca in Tuscany, John Eldevik places the social dynamics of collecting the church tithe within current debates about religious reform, social change and the so-called 'feudal revolution' in the eleventh century, and analyses a key economic institution, the medieval tithe, as a social and political phenomenon. By examining episcopal churches and their possessions not in institutional terms, but as social networks which bishops were obliged to negotiate and construct over time using legal, historiographical and interpersonal means, this comparative study casts fresh light on the history of early medieval society.

A study of the Christianisation of southern France through the career and writings of Bishop Caesarius of Arles.
