"Blood transfusion is a

Download Free Blood Bank

life-saving intervention that has an essential role in patient management within health care systems. All Member States of the World Health Organization (WHO) endorsed World Health Assembly resolutions WHA28.72 (1) in 1975 and WHA58.13 (2) in 2005. These commit them to the provision of

Download Free Blood Bank

adequate supplies of safe blood and blood products that are accessible to all patients who require transfusion either to save their lives or promote their continuing or improving health." --Preface.

Individuals who donate their blood provide a unique and precious gift in an act of human

Download Free Blood Bank

solidarity. In order to donate blood, prospective donors should be in good health and free from any infections that can be transmitted through transfusion. Most blood donors perceive themselves to be healthy, but some are unsuitable to donate blood due to the potential risk of

Download Free Blood Bank

compromising or
worsening their own
health or the risk of
transmission of
infections to patients.
Blood transfusion
services (BTS) have a
duty of care towards
blood donors as well as
to the recipients of
transfusion. This duty of
care extends to
prospective donors who
are deferred from

Download Free Blood Bank

Management--whether on a temporary or permanent basis--as well as those who donate blood and are subsequently found to have unusual or abnormal test results.

BTS have a responsibility to confirm test results and provide information, counseling and support to enable these individuals to understand and respond

Download Free Blood Bank

to unexpected information about their health or risk status.

Counseling is part of the spectrum of care that a BTS should be able to provide to blood donors--including referral to medical practitioners or specialist clinical services. Pre-donation counseling was recognized as one

Download Free Blood Bank

element of the strategy to reduce and, if possible, prevent the donation of blood by individuals who might be at risk for HIV and other TTI including hepatitis B and C viruses as well as to inform the donor of the donation process and testing of blood for HIV. Post-donation counseling was

Download Free Blood Bank

acknowledged to be a necessary element of donor management as an adjunct to informing donors of unusual or abnormal test results. Blood donor counseling by trained specialist staff is now considered to be a key component of the blood system in most countries with a well-developed blood transfusion service. It

Download Free Blood Bank

Management
System Project

may be required at a number of stages in the blood donation process or following blood screening and should be available at any point at which the BTS has an interface with donors. In many countries, however, blood donor counseling is not yet available in a structured way. Blood Donor Counselling:

Implementation

Guidelines has therefore been developed to provide guidance to blood transfusion services that have not yet established donor counseling programs.
