circulation; Systemic  
circulation; The right side  
of the heart pumps blood to  
the lungs (pulmonary  
circulation). In the lungs  
blood gets oxygenated from  
the air sacs. At the same

a closed system if the heart and blood vessels. The heart pumps blood through a closed system of blood vessels.

Blood vessels allow blood to circulate to all parts of the body. Arteries usually colored red because oxygen

the heart to capillaries  
within the tissues.

in a sac, the pericardium,  
which protects it and  
prevents it from over-  
expanding, anchoring it

Cardiovascular anatomy and physiology The circulatory system is also called the cardiovascular system, where “cardi” refers to the heart, and “vascular” refers to the

blood vessels. So, these are the two key parts: the heart, which pumps blood, and the blood vessels, which carry blood to the body and return it back to the heart again.

The Cardiovascular System

The branches of science that will help you understand the body parts and functions are anatomy and physiology.

Anatomy deals with the study

Anatomy and Physiology. The

cardiovascular system

relates to the heart, blood

vessels, and blood. Blood
