When The Human Genome Project set out to map and identify the sequence of chemical base pairs which make up DNA, it determined that 97% of the human genome does not encode protein sequences. This 97%-considered 'Junk DNA'-has no known function. What really lies in the 97% that scientists call "JUNK DNA"? Your DNA tells an amazing story—the story of Life itself! For the past four billion years or so, since the beginning of time, DNA has been the chemical of life. Everything that has ever lived, or now lives on the planet, has DNA—just as you do. Everyone is taking DNA tests! Including me. I woke up one morning a stranger in my skin. I was no longer the woman I had built for 30 years. I was a lost soul with only a hologram existence. My Birth Certificate was a flat out lie. I was not the little girl from Gulfport with just honey brown skin. I was not the little girl who tried to straighten her curls. I was Val with a biological change in my mental makeup all because I spit into a DNA test tube. I lost not only my fake false identity. I lost my race. I was raised white. To think white. To see white. My mothers lie took me on a road of self discovery that I must share. In order to heal and move past my racial beginnings. I confront the truth about racial relations and how every family has a voice in who we have actually become. My story started prior to the racial debate on full display in 2020. My look on the inside is a window of opportunity to help enlighten both Americas to our truths in racial justice and equality. How did my family react to my new discoveries? Did I change as a human being? Was my white husband of 30 years shocked to find his wife is a half black woman and not the white girl her mother forced upon her? Is there a difference in our races? Or did I discover we really are all the same? Was I able to forgive my mother for causing such deep pain that still resides deep in my soul with every breathe I take?

Most books about self growth or self involvement starts by telling how you can let go of all the old stuff that you have gathered through your life until now. But when you start to pierce a hole in the bag it becomes quite overwhelming. I have chosen to start at the embryo and talks about how and why we pick up all the things from which we use to build us self. When we understand this, it's easier to let go of the things we no longer want to be a part of who we are. Self involvement means that the Self consciously chooses to evolve. We constantly evolve but only when we become aware the Self or the personality takes an active part in this and starts an exponential growth in understand life itself. It is about getting an overview; overview takes away many frustrations about not being able to understand one's own situation, and when the frustrations diminish, one have more energy to actually be an active and aware participant in one's life.

'Early nineteenth-century France had Balzac, we have Tim Pears' The Times For John, a potato isn't just a staple food, it's also something wondrous, the secret of his success and the key to the future. With his brother, Greg, he has turned his father's greengrocery business into Spudnik, Britain's largest dealer in potatoes. Now he wants to change the world by introducing, through potatoes, edible vaccines: plants genetically modified to provide an edible alternative to injections. But as John spins round and round the ring road avoiding his turn off to work he has to figure out how to tell his brother that deep in the Venezuelan jungle, volunteers have died during the latest illegal trials. Deaths that they have to find some way to hide. Wake Up is a book about our times, and how we are hurtling, almost silently, into a new age with implications that are unfathomable. Funny, fluent, and provocative it is a major new novel from one of our finest contemporary writers.

In 1992 the National Research Council issued DNA Technology in Forensic Science, a book that documented the state of the art in this emerging field. Recently, this volume was brought to worldwide attention in the murder trial of celebrity O. J. Simpson. The Evaluation of Forensic DNA Evidence reports on developments in population genetics and statistics since the original volume was published. The committee comments on statements in the original book that proved controversial or that have been misapplied in the courts. This volume offers recommendations for handling DNA samples, performing calculations, and other aspects of using DNA as a forensic tool--modifying some recommendations presented in the 1992 volume. The update addresses two major areas: Determination of DNA profiles. The committee considers how laboratory errors (particularly false matches) can arise, how errors might be reduced, and how to take into account the fact that the error rate can never be reduced to zero. Interpretation of a finding that the DNA profile of a suspect or victim matches the evidence DNA. The committee addresses controversies in population genetics, exploring the problems that arise from the mixture of groups and subgroups in the American population and how this substructure can be accounted for in calculating frequencies. This volume examines statistical issues in interpreting frequencies as probabilities, including adjustments when a suspect is found through a database search. The committee includes a detailed discussion of what its recommendations would mean in the courtroom, with numerous case citations. By resolving several remaining issues in the evaluation of this increasingly important area of forensic evidence, this technical update will be important to forensic scientists and population geneticists--and helpful to attorneys, judges, and others who need to understand DNA and the law. Anyone working in laboratories and in the courts or anyone studying this issue should own this book.
