The available number of holes on the indexing plates are given as a comma separated list of integer values (For example, if your plates have 11, 12 and 15 holes, enter "11, 12, 15" in the textbox below. To see all possible divisions up to 128 divisions using your set of plates, click the "display table" button.

Index Plate Calculator
An indexing head, also known as a dividing head or spiral head, is a specialized tool that allows a workpiece to be circularly indexed; that is, easily and precisely rotated to preset angles or circular divisions. Indexing heads are usually used on the tables of milling machines, but may be used on many other machine tools including drill presses, grinders, and boring machines. Common jobs for a dividing head include machining the flutes of a milling cutter, cutting the teeth of a gear, milling

Indexing head - Wikipedia
In a nut shell, a dividing head is simply a spindle mounted with a precision worm wheel and provided with a crank attached to the worm shaft. The crank's handle is equipped with a spring loaded plunger that will drop an indexing pin into equally spaced holes in a disk mounted behind the crank.

Dividing Head - Jim's Home Planet
Manual Genuine Myford dividing head attachment, complete with 4 in chuck and key plus 2 plates and an adaptor block to mount on any milling machine. It has used very few times . This is a private listing and your identity will not be disclosed to anyone except the seller.

Myford Dividing head attachment | eBay
The dividing head is essentially a horizontal (though sometimes tiltable) shaft with a wormwheel on it that can be driven round by means of a worm. The shaft has various means of holding a workpiece. This may seem very similar to a rotary table. It is different in that there is no table to mount the workpiece on.

Dividing head - introduction | john f's workshop
The divide head is similar to that of mounting a lathe head on a milling machine table to produce a horizontal rotating axis, where as a rotary table is more commonly used to rotate the work piece vertically.

M-Machine USING A DIVIDE HEAD AND ROTARY TABLE
The HTH Half-Universal Dividing Unit with manual turning and swivel axis is available with center heights of 100, 125, 160 and 200 mm. The spindle head of the turning axis can be swiveled from 0° to 90°. Turning axis indexing can be carried out with:

Hofmann HTH Tilting Dividing Heads
The primary purpose of a dividing head is to divide a circle into any number of equal segments (sometimes referred to as divisions) as is required for gear cutting, machining spokes, etc. Depending on the range of indexing circles, almost any division is possible. It may even be possible to divide into unequal segments.
