Currently, rimegepant and ubrogepant have been developed for acute migraine treatment, while atogepant is studied for migraine prophylaxis. Of these drugs targeting CGRP signaling directly, eptinezumab, erenumab, fremanezumab, galcanezumab, rimegepant and ubrogepant have been approved for clinical use, while atogepant is in the last stage before approval.

~~Pharmacological treatment of migraine: CGRP and 5-HT ...~~

Triptan medicines are a specific painkiller for migraine headaches. They're thought to work by reversing the changes in the brain that may cause migraine headaches. They cause the blood vessels around the brain to narrow (contract). This reverses the widening of blood vessels that's believed to be part of the migraine process.

~~Migraine Treatment NHS~~

The CGRP receptor can be targeted by the monoclonal antibody erenumab, or by small-molecule antagonists called gepants. Currently, rimegepant and ubrogepant have been developed for acute migraine treatment, while atogepant is studied for migraine prophylaxis.
