Using a range of international examples to compare the reality, purpose and effect of student engagement in universities across the globe, Student Engagement and Quality Assurance in Higher Education argues that teachers and students need to collaborate to improve the quality of university education and student learning. The growing trend of assessing and assuring quality in higher education is incredibly complex, as there are so many variables affecting both experiences and measures. With case studies from ten countries, covering a variety of cultural and environmental settings, this book focusses on ways of working with students to produce applicable, implementable strategies for universities the world over. Internationally applicable, this book presents ideas from a range of cultures, which can be adapted to be implemented in a variety of cultures. The reader is provided with a range of approaches where both the advantages and disadvantages are clearly presented. The ten case studies consider the macro, meso and micro levels of each approach, allowing for an exploration of the growing area of research and practice that is student-staff partnerships, showcasing ways of working with students to enhance engagement and quality, which are vital for a long-term approach. Focussing on one of the main reform topics for universities, Student Engagement and Quality Assurance in Higher Education is essential reading for educational researchers, institutional leaders and all concerned with the implementation and progression of student engagement and quality assurance in higher education.

This book gathers high-quality research papers presented at the First International Conference, ICSC 2019, organised by THDC Institute of Hydropower Engineering and Technology, Tehri, India, from 20 to 21 April 2019. The book is divided into two major sections – Intelligent Computing and Smart Communication. Some of the areas covered are Parallel and Distributed Systems, Web Services, Databases and Data Mining Applications, Feature Selection and Feature Extraction, High-Performance Data Mining Algorithms, Knowledge Discovery, Communication Protocols and Architectures, High-speed Communication, High-Voltage Insulation Technologies, Fault Detection and Protection, Power System Analysis, Embedded Systems, Architectures, Electronics in Renewable Energy, CAD for VLSI, Green Electronics, Signal and Image Processing, Pattern Recognition and Analysis, Multi-Resolution Analysis and Wavelets, 3D and Stereo Imaging, and Neural Networks.

Physical Literacy across the World records the progress of the concept of physical literacy over the last decade. It examines developments, issues and controversies in physical literacy studies, and looks at how the concept has been implemented around the world. Contributions from practitioners and researchers across the world tell unique stories of the way physical literacy is changing perceptions of physical activity through research and the generation of scholarly writing, the creation of new national and local policies, and the development of partnerships with a range of professions. The book argues that physical literacy has value beyond formal education, such as in occupational and recreational settings, as well as for early years children and older people, and shows how life story methods can explain our physical literacy journeys. At root, it sets out a case for the significance and value of physical literacy as making a notable contribution to human flourishing. This is important reading for anyone with an interest in physical activity, health and well-being, sport studies, physical education, or the philosophy related to physical activity.

This volume deals with medieval comparative Semitic philology (Hebrew/Aramaic/Arabic) as practised by Hebrew philologists in the Arabic speaking lands, from Iraq to Spain, discussing its development through the generations (10th-12th cent. CE), its technics and its theoretical basis.

This book offers an ecological conceptualisation of physical literacy. Re-embracing our ancestry as hunter gatherers we gain a new appreciation and understanding of the importance of play, not only in terms of how children learn, but also in showing us as educators how we can lay the foundations for lifelong physical activity. The concept of physical literacy has been recognised and understood throughout history by different communities across the globe. Today, as governments grapple with the multiple challenges of urban life in the 21st century, we can learn from our forebears how to put play at the centre of children ' s learning in order to build a more enduring physically active society. This book examines contemporary pedagogical approaches, such as constraints-led teaching, nonlinear pedagogy and the athletic skills model, which are underpinned by the theoretical framework of Ecological Dynamics. It is suggested that through careful design, these models, aimed at children, as well as young athletes, can (i) encourage play and facilitate physical activity and motor learning in children of different ages, providing them with the foundational skills needed for leading active lives; and (ii), develop young athletes in elite sports programmes in an ethical, enriching and supportive manner. Through this text, scientists, academics and practitioners in the sub-disciplines of motor learning and motor development, physical education, sports pedagogy and physical activity and exercise domains will better understand how to design programmes that encourage play and thereby develop the movement skills, self-regulating capacities, motivation and proficiency of people, so that they can move skilfully, effectively and efficiently while negotiating changes throughout the human lifespan.

This book provides an analysis of the European Parliament elections 2019 with a focus on East-Central European countries. The authors offer conceptual insights into Euroscepticism and discuss traditionally familiar concepts in a new light, pairing East-Central European Euroscepticism with visions of illiberal democracy, on the one hand, and showing the increasing Europeanisation of Eurosceptic parties in the region, on the other. The book combines a fresh and innovative conceptual treatment with rich and accurate empirical evidence in order to highlight the dynamics of Euroscepticism in "new" EU member states. Students and experts interested in EU politics, within academia and beyond, will find this volume particularly informative.

A trusted classic for over 50 years, Krause and Mahan ' s Food & the Nutrition Care Process, 15th Edition presents the most up-to-date dietetics content available in this ever-changing field to ensure you provide optimal nutritional care. It offers cutting-edge, comprehensive coverage of a full range of dietetics topics, all in one book. You ' ll benefit from in-depth information from clinical specialists that provides practical and evidence-based recommendations related to nutrition assessment and intervention, nutritional needs of individuals in different stages of the life cycle, nutrition for health and fitness, and medical nutrition therapy. UNIQUE! Pathophysiology algorithms present the cause, pathophysiology, and medical nutrition management for a variety of disorders and conditions to help you provide optimal nutritional care. UPDATED! Inflammation and the Pathophysiology of Chronic Disease chapter offers vital information to help you understand how diet and nutrition affect the body and contribute to disease processes. UPDATED! Part III: Nutrition in the Life Cycle section of chapters explains the newest nutrition guidelines from pregnancy through adult years to increase your understanding of the nutritional needs of patients at every age. Clinical case studies help you translate academic knowledge into practical patient care using the nutrition care process. Nutrition Diagnosis boxes present a problem, its etiology, and its signs and symptoms before concluding with a sample nutrition diagnosis, providing you with real-life scenarios you may encounter in practice. Clinical Insight boxes expand on clinical information, highlight new areas of focus, and contain clinical resources for your studies.

The G5 Sahel countries (Burkina Faso, Mali, Mauritania, Niger and Chad) will organize elections in 2020 and 2021. These elections will take place in a context in which all are facing serious humanitarian and security challenges, aggravated by the fragility of their institutions. The spread of the COVID-19 pandemic and its socio-economic impacts worsen the situation and even raise questions about the possibility to organize elections in so volatile an environment. This Guide has been developed to assist decision-makers and practitioners in this context. It provides an overview of 26 process-related risk factors that can trigger or contribute to triggering election-related violence. These internal risk factors are election-specific and do not exist outside of the electoral context. They relate to electoral actors, events, practices and materials that can undermine the credibility of electoral processes or, in the worst-case scenario, trigger or contribute to triggering election-related violence.
